PLANET

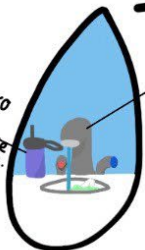

PLASTICS

VS...

WHAT'S HAPPENING TO THE ENVIRONMENT?

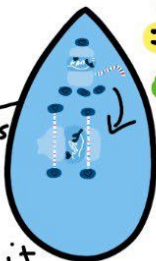

HOW TO HELP

Try to use reusable bottles.

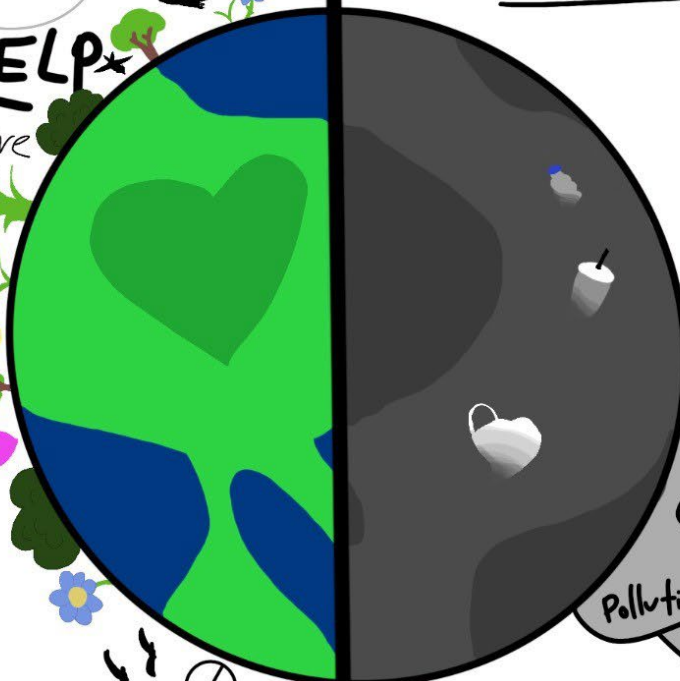

Try to save tap water

Try to find other uses for plastic before throwing it away.

Try not to use single use plastics.

Microplastics are getting into rivers.

Animals can mistake plastic for food and get sick.

Pollution harms everyone's health.

YOU CAN DECIDE.

HOW TO PROTECT THE PLANET

THE PROBLEM

our planet is becoming more and more like trash every day. Ice is melting, innocent animals are going extinct, and we are doing nothing to help. But that can change. Here are some ways you can help this year.

PLANT TREES

Did you know that 1 tree can supply oxygen for 10 people for one year? By chopping down trees not only are we taking away our oxygen supply but we are also destroying animal habitats. By planting trees, flowers or even making a bird feeder then you are helping out the earth a bunch.

SAVE ENERGY

Cars emit greenhouse gases. Gases that get trapped in our atmosphere that cause the temperature to rise. You can prevent this by buying a solar panel using renewable sources or using less electricity.

SAVE TRASH

Even though you may feel like you are doing a good job by recycling only 5-8% actually gets used. The rest goes to a dump. This can be eliminated by using reusable items like metal water bottles or cotton shopping bags.
